

JOHN LYLE STAINLESS STEEL  
CARE INSTRUCTIONS

STAINLESS STEEL

Stainless steel furniture requires only occasional cleaning to keep it looking fresh and bright. Use a detergent or stainless steel cleaner to remove any oxidation that may form on the surface. Oxidation is rare, but should it occur, it will not corrode your furniture and is easily wiped off. Do not use abrasives or scouring powder to clean stainless steel furniture.

Please note that salt water and salty sea air may act as abrasives. Care must be taken in seaside climates.
